90-minute lecture plan · Elicitation techniques

Follow-up to the missed-exams lab · Artifacts: tutorials/eliciation2/ One pager

LEARNING OUTCOMES

- Explain introspection vs hard-data analysis without confusing either with a finished requirement.
- Compare elicitation techniques (pros, cons, suited context) using the lecture technique table.
- Argue when to pick interviews, workshops, observation, surveys, documents, or prototyping.

AGENDA (90 MIN)

0–8 Recap
Four terms: introspection, hard data / ground truth, conflict of objectives, problem space. Do not re-run the full lab.

8–22 Two checks
Project index.html. Room votes. Q1 introspection → C. Q2 ground truth → C. Discuss distractors briefly.

22–40 Group work
Assign G1–G6 one technique each. Draft pros / cons / suited context (~15–18 min).

40–75 Board debrief
Scribe into board.html; project the summary table. Compare contexts. Sample answers only after their round.

75–90 Close
Two takeaways + export board JSON if useful. Point to the filled technique table as the session artifact.

MCQ KEYS (DO NOT PROJECT)

Q1 Introspection → C
Reminder is a solution. Introspection collected beliefs; it did not validate a need. Press anyone defending “we agreed.”

Q2 Ground truth → C
Counts locate problem-space conditions. Jumping to scheduler conflict-detection skips whose objective is served. A/D absolute & false; B is a sample-size red herring.

GROUP → TECHNIQUE

G1	Interviews
G2	Workshops
G3	Observation / site visit
G4	Surveys / questionnaires
G5	Document analysis
G6	Prototyping

Introspection + hard data = last week (optional 1-min refresh). Stuck prompts on instructor.html.

CLOSE · TWO LINES (+ PREVIEW)

→ Elicitation chooses sources and techniques — no single technique is enough.
→ Hard data and introspection both mislead when they skip the problem space.
→ The filled technique table (pros / cons / context) is the session artifact.

OPEN IN CLASS

index.html — recap + MCQs | board.html — pros / cons / contexts | instructor.html — private keys

Serve: python3 -m http.server --directory tutorials/eliciation2
